TITLE: On Certain Subgroups of Simple Real Lee Groups (O nekotorykh podgruppakh prostykh veshchestvennykh grupp Li)

PERIODICAL: Uch. zap. Kazansk. un-ta, 1955, 115, Nr 14, pp. 157-158

ABSTRACT: Let G_K be a complex unimodular group; G_b its real form, consisting of transformations retaining the given form of Hermite V invariant; and let K be a subgroup of triangular matrices with zeros below the main diagonal. The classes of subgroups adjoint in G_b and of the type

$$g^{-1}Kg \cap G_b \quad (g \in G_K)$$

are investigated. It is proved that every class contains a

subgroup of the type $U^{-1}KU \cap G_b$ where $uvu^* = S$; v is a matrix

of V form and S is a symmetrical permutation-of-axes matrix.

This subgroup consists of matrices $U^{-1}KU$, where $ksk^* = S$. Transitivity classes of the subgroup G_b , acting in the uniform space G_K/K , are also described.

TITLE: The Measure of Wiener and Its Application for Approximate Methods. I

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy. Matematika, 1959, Nr 6, pp 145-158 (USSR)

ABSTRACT: Let C be the space of all functions $x(t)$, $x(0)=0$ continuous on $[0, 1]$. The space $L_2(C)$ consists of all functions $f(x)$ on C for which

$$(1) \quad \|f\|^2 = \int_C |f(x)|^2 d_w(x) < \infty.$$

The author considers functionals of the type of functions

$f(x) = \int_0^1 q(t)x(t)dt$. The approximations $\tilde{f}(x) = \sum_{i=1}^n C_i x(t_i)$ are

sought, where the constants C_i and the knots t_i are determined from the condition that \tilde{f} is the best approximation of f in the sense of the norm (1). § 1 has an introducing character. § 2

Card 1/3

The Measure of Wiener and Its Application for
Approximate Methods. I

06316

SOV/140-59-6-19/29

treats the best approximations of the kind $\int_0^1 x(t)dt \approx \sum_{i=1}^n c_i x(t_i)$

and § 3 is devoted to the best approximations $\int_0^1 q(t)x(t)dt \approx$
 $\approx \sum_{i=1}^n c_i x(t_i)$. The author proposes new formulas for the calculation
of Fourier coefficients, e.g.:

$$(10) \int_0^1 \sin 2\pi m t \cdot x(t) dt \approx \left[\frac{\sin \frac{\pi m}{n}}{\frac{\pi m}{n}} \right]^2 \cdot \frac{1}{n} \sum_{k=1}^n x\left(\frac{k}{n}\right) \sin \frac{2\pi m k}{n} +$$

$$+ \frac{x(1)}{2\pi m} \left[\frac{\sin \frac{2\pi m}{n}}{\frac{2\pi m}{n}} - 1 \right].$$

TITLE: The Measure of Wiener and its Application to Approximation Methods. II

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy. Matematika, 1960.
No. 5, pp. 165 - 179

TEXT: The present paper is a continuation of (Ref. 3) and uses the same notations.

Let $F(x)$, $F_i(x)$, $i = 1, 2, \dots, n$ be linear functionals of $L_2(C)$:

$F(x) = \int_0^1 x(t) d\tilde{\sigma}(t)$, $F_i(x) = \int_0^1 x(t) d\tilde{\sigma}_i(t)$, where $\tilde{\sigma}(t)$, $\tilde{\sigma}_i(t)$

are right continuous functions with a bounded variation. Among the approximation formulas

$$(1) \quad F(x) \approx \sum_{i=1}^n c_i F_i(x)$$

that is called the best one for which the integral :

Card 1/5

The Measure of Wiener and its Application
to Approximation Methods. II

S/140/60/000/005/017/021
C111/C222

$I = \int_0^1 \left[F(x) - \sum_{i=1}^n C_i F_i(x) \right]^2 d_w(x)$ has a minimum as a function in C .

It is shown that one obtains the best approximation formula by determining the constants C_i from

$$\sum_{i=1}^n C_i \int_0^1 \sigma_i(t) \sigma_k(t) dt = \int_0^1 \sigma(t) \sigma_k(t) dt$$

This formula is strong in the subspace C generated by the functions

$$\varphi_k(t) = \int_0^t \sigma_k(t) dt.$$

Let R_m be an m -dimensional subspace of C with the base $\varphi_1(t), \varphi_2(t), \dots, \varphi_m(t)$, $m \leq n$. The author seeks the best formula (1) under the

additional condition that it is strong in R_m . Let the functionals F_i be orthogonally normed, let the base be chosen so that

Card 2/5

58170

The Measure of Wiener and its Application
to Approximation Methods. II

S/140/60/000/005/017/021
C111/C222

$\sum_{i=1}^n F_i(\varphi_k) F_i(\varphi_s) = \delta_{ks}$. Then the C_i for the best formula can be determined from

$$C_i = (F, F_i) + \sum_{s=1}^m \left[F(\varphi_s) - \sum_{k=1}^n (F, F_k) F_k(\varphi_s) \right] F_i(\varphi_s).$$

For an approximation by functionals of polynomial type, the best formula is

$$F(x) \approx \sum_{i=1}^n \int_0^1 (t-1) \tilde{\sigma}(t) P_i(t) dt \int_0^1 x(t) d[(t-1) P_i(t)].$$

where $P_i(t)$ are Jacobian polynomials on $[0, 1]$ normed with the weight $(t-1)^2$.

The form is strong in the space of all polynomials of degree $n+1$ and lower which satisfy the conditions $P(0) = 0$, $P'(1) = 0$.

The best among the formulas $F(x) \approx \sum_{k=1}^n a_k \int_0^1 x(t) d \sin k \tilde{\pi} t$ is that

Card 3/ 5

The Measure of Wiener and its Application
to Approximation Methods. II

6525P

S/140/60/000/005/017/021
C111/C222

where $a_k = 2 \int_0^1 \delta(t) \sin k\pi t dt$. The best among $F(x) \approx \sum_{k=1}^n c_k x(t_k)$ is
the formula

$$F(x) \approx \sum_{k=1}^n \int_{t_{k-1}}^{t_k} [-\delta(t) dt] \frac{x(t_k) - x(t_{k-1})}{t_k - t_{k-1}}$$

The formula is strong in the subspace generated by

$$\varphi_k(t) = \begin{cases} t & \text{for } t < t_k \\ t_k & \text{for } t \geq t_k \end{cases}$$

The author gives the best formula : $F(x) \approx \sum_{k=1}^n c_k x(t_k)$ being strong in
the space of all polynomials $P(t)$ of degree $\leq m$, $P(0) = 0$, and then it is
used for obtaining best quadrature formulas being strong in the same space.
These results are used for an approximation of the δ - function.

TITLE: The regression method in the theory of approximations

CITED SOURCE: Uch. zap. Kazansk. un-t, v. 123, no. 6, 1963, 3-35

TOPIC TAGS: approximation theory, regression method, least square principle, probability, approximated formula reliability, approximated formula error, Biner measure

TRANSLATION: The regression method, in whose foundations is assumed the principle of least squares, is used to obtain various approximated formulas. This is done from the point of view of probability. The concept of reliability of the approximated formula is introduced, replacing the concept of error. Thus, the author notes that the reliability in practice is computed more simply than the error. In functional space, the Biner measure is used as well as measures induced by the Biner measure.

2892. Suter, E., and Sandre, A. Methods of reducing cost of concrete construction by proper organization in construction, *Ind. Constr. Mater. Constr. T.*, 1, 78-85, Feb. 1954.

Costs of concrete in construction are analyzed, and suggestions made for their reduction, especially as to economy of design and transportation of materials. *Ind. Constr. Mater. Constr. T.*, 1, 78-85, Feb. 1954. The text continues with a detailed analysis of concrete construction costs, including labor, materials, and equipment. It discusses various methods for reducing costs, such as improved design, efficient transportation, and better organization of construction work. The text is written in a technical, academic style. At the bottom right of the page, there is a handwritten signature that appears to be "W. G."

1852. A CASE OF THE STURGE-WEBER SYNDROME WITH ORGANIC DISORDERS OF CHARACTER - Przypadek choroby Sturge-Webera z organicznymi zaburzeniami charakteru - Sulestrowska H. and Billewicz O. Odd. Psychiat. Dziec. Klin. Chor. Psychiczych A.M., Gdańsk - NEUROL. NEUROCHIR. PSYCHIAT. POL. 1958, 8/1 (121-126) illus. 6

Description of a case in a 9-year-old girl. Among the typical symptoms of the disease, a unilateral angioma of the face, epilepsy and characteristic calcifications of the cerebral cortex in the occipital region were observed. Deviations in the neurological state were very discrete and there were no symptoms of glaucoma. In the psychic sphere, attention is called to an absence of the symptoms of mental deficiency or dementia, while a considerably intensified psychomotor impulsion, quite distinct euphoria and strongly expressed organic disorders of character were present.

(VIII, 5, 16)

1111

of a 10-year-old boy with adiposo-genital dystrophy, whose intelligence level was very high (wonder child) with artistic and literary abilities. His psychic disturbances corresponded to endocrinic characteropathy with an anancastic disposition and phobias, which existed since he was 4 years old. A largactil treatment gave good results.
